

To BYOD or not to BYOD?

Getting the best out of technology in 21st century classrooms.

As the National Secondary Schools Computer Fund comes to an end, you may have wondered what's the best way to put laptops, tablets and other devices in the hands of students.

A 'bring your own device' (BYOD) environment can seem like a simple solution – but how do you implement BYOD effectively while ensuring the best possible learning outcomes? And is it the right option for you?

A straightforward look of BYOD

Unsurprisingly, a BYOD environment is a lot more complex than it looks, and it's essential to know what works and what doesn't – as well as unpack the myths. At this exclusive event, Bruce Dixon, Founder and President of the *Anytime, Anywhere Learning Foundation*, will evaluate several BYOD models, and uncover their benefits and pitfalls for learning.

A chance to ask an expert

The presentation is designed to stimulate discussion of sustainable, scalable and replicable models for 1-to-1 learning – so participants are encouraged to volley questions or experiences.

A seminar not to be missed

We do hope you'll join us at this special BYOD breakfast seminar. Please register your attendance today.
