Now featuring

mimio Studio

interactive resources and lesson creation software

A dramatic advance in interactive performance & value! See overleaf.

Optional mimio wireless

Technology advantage for a few or for everyone?

The research results are indisputable. Interactive Whiteboard technology deployed in classrooms and integrated into curriculum teaching consistently generates higher levels of student interest, retention and performance, as measured by test scores.

mimio Xi's combination of low price and portability makes Interactive Whiteboards an option for every classroom, without compromising the features and power you expect to receive from much higher priced fixed location solutions!

Active vs. Passive Whiteboards in the classroom

mimio Xi is an affordably priced solution that transforms any dry erase whiteboard into a multi-function board system seamlessly integrated into Information Technology /ICT infrastructure, whether basic or complex. Quick to install (for fixed or temporary locations) and easy to use, mimio Xi turns those passive whiteboards already installed in your classrooms into dynamic digital learning platforms that ease and invigorate teaching.

Use with a data projector – it's an interactive touch-screen

With the mimio stylus, teachers and students can control any projected applications or interactive curriculum materials directly from the whiteboard! mimio Studio's powerful suite of interactive software resources provides everything from virtual whiteboard pages to annotation & mark-up and presentation tools that can be used with any application or document. mimio Xi locates your computer at the board and makes your desktop a shared classroom resource with a giant 80+" display!

Use without a projector – it's a whiteboard recorder

Capture your regular whiteboard notes to the mimio Studio Notebook. Then review, edit and share by print, email or the web. View interactively, copy or export to other applications. Now students can be engaged in the lesson, rather than concentrating on copying your board notes!

"Record & Store" option: with no computer connection required, up to 10 hours of class notes can be stored in mimio Xi's on-board memory for later download, eliminating the need for a PC in the classroom (or meeting room).

Contact your mimio dealer (www.mimio.com) and see for yourself how mimio Xi opens up new horizons and opportunities for interactive teaching!
