

# Skill Building

Remember to write it in pseudocode first!

## Skill 4: election.py

It's election time in Roughead Region! Fred Ferris and Georgia Green are both hoping to win the election, but it's up to the people to decide. Within the Region are six electorates, each with a different population:

Electorate	Population
Harrison	1023
Nimbottom	34,870
Goosehead	23,452
Davis	530
Ferdinand	67,001
Charles	10,080

Calculate the number of people who will vote for each candidate, and ultimately who is the winner of the election. Keep in mind there are children below 16, and elderly above 80 do not have to vote.
