

FULL STEaM AHEAD - Girls Designing an Inclusive Society. A one-week STEM based work experience program for Year 10 Girls – 10-14 July 2017

FSA Team 2016

Akorn Educational Services and Enable Development are once again pleased to offer this amazing opportunity for Year 10 girls to participate in the 5-day 2017 *FULL STEaM AHEAD - Girls Designing an Inclusive Society* program.

In a recent World Report on Disability, it is estimated that 1 in 5 people globally has a disability, which in Australia is calculated to be 4.27 million people. The majority of these people experience social exclusion, discrimination and lack of access to fully participate in society due to the barriers such as built environment and negative attitudes.

Responding to this challenge, students will collaborate to generate ideas and develop assistive/enabling technologies that will overcome said barriers. During the program students will be supported by Enable Development's facilitator team and the Akorn Educational Services team to establish the appropriate analytical framework and user centered design to come up with sustainable and viable solutions.
