

WHAT IS ACTIONSCRIPT?

ActionScript is the programming language for Flash. ActionScript enables efficient programming of Flash applications for everything from simple animations to complex, data-rich, interactive application interfaces. From basic robotics to the creation of Web-based games and rich Internet applications with streaming media (such as video and audio), this day of learning is designed to suit you.

ActionScript Holiday Program

"So far I have participated in 2 sessions with Kevork's ActionScript PD. I have had virtually no previous experience with flash but I am an experienced programmer - although not in ActionScript. So far, I have enjoyed the sessions and have found the notes, together with Kevork's expert assistance to be very good. I have previously attended Kevork's PHP and MYSQL inservice sessions. He is a top presenter and educator."

Gary Frankel, Bialik College 2009

Date: Monday 5 July 2010

Time: 9:00am - 4:00pm

Venue: Forest Hill Secondary College, 178 -180 Mahoneys Rd, Burwood East (Mel Ref 62 C5) There will be sufficient parking at Forest Hill College. Continue up the drive, and park in the bays on your left.

Beginner's Actionscript 3 - programming from the ground up leading to games creation in Intermediate ActionScript 3.0. The session is tailored to fit the beginner, intermediate or advanced learner, with notes and exercises ready for participants at any proficiency level.

The session is delivered by Kevork Krozian, an experienced teacher and author.
